

Deer Repellent

EPA Reg. No. 66676-1 EPA Est. No. 407-IA-1

TREE GUARD® Deer Repellent

TREE GUARD® is a pre-mixed, ready-to-use deer repellent that sprays on milky and dries clear. The active ingredient, Bitrex™, makes the coated plant taste bad. A detection agent lets deer know the plant has been treated. TREE GUARD leaves a clear sheen, which resists washing off from rain and snow. TREE GUARD may be used on any non-food plant, and poses minimal risk to deer, plants, people and the environment.

- Apply before deer damage occurs.
- Two light applications are better than one thick application.
- Touch-up new growth—it is not protected.
- Re-apply if deer need more training.
- Wear gloves and wash hands after use.
- Product must dry completely before rain or snow for proper adherence.
- Rinse spray equipment immediately following use.

Note: Always consult the label for specific instructions prior to use.

Becker Underwood offers a complete line of nuisance wildlife management products for your specific needs.

Deer Repellent

- Use on flowers, shrubs, and trees
- Lasts up to 100 days
- Rain resistant
- Ready-to-use

Application Guide

Plant	Size	1 Gallon Covers:
Tree, Large	Treated to 5' Tall	17 Trees
Tree, Pyramid	15"-18" Tall	77 Trees
Shrub, Broadleaf	24"x24"	30 Shrubs
Evergreen, Seedling	6"-8" Tall	1000 Seedlings
Hosia	24" Wide	15 Plants
Ornamental Flower	15"-20" Tall	80-100 Plants
Pine Tree	3' Wide - 5' Tall	10 Trees

Application Directions

This product is ready-to-use and should not be diluted. Shake container well before using. Apply TREE GUARD® directly using the squeeze trigger applicator. If the container lacks a squeeze trigger, transfer product into any pump-type sprayer equipped with a cone or flat fan nozzle.

Adjust nozzle to obtain even coverage. Apply only to dry plants. Hold spray tip 1 to 2 feet from plants to be treated and spray leaves, needles, buds, branches and trunks subject to browsing by deer. Spray plant and leaf surfaces thoroughly but do not apply to the point of significant spray run-off.

For small shrubs such as global arborvitae 20-24" high, approximately 4-5 plants can be treated with the contents of a 1-quart container. Less product per plant is needed when treating smaller or less densely foliated plants; larger, heavily foliated plants will require greater amounts of product.

Repeat treatments if deer damage resumes. For best results, apply to bare branches in fall, after the first frost, and to unprotected foliage in spring.

Use Restrictions

This product may be used to discourage deer (*Odocoileus* spp.) from feeding on shrubs, ornamental plants, conifers, and non-bearing deciduous trees.

Use this product only at ambient temperatures between 40°F and 90°F. Where deer pressure is high, consider other abatement options, including fencing.

Do not use on food or feed crops. Do not apply aerially. Do not apply product through any type of irrigation system or hose proportioner applicator. Do not apply directly where product might drift onto stone, concrete, or siding as staining might occur.

TREE GUARD® has been tested on many species of ornamental plants and is believed not to be generally phytotoxic. Nevertheless, it is advisable to test the product on types of plants which may be especially sensitive by treating and observing small portions of the plant before treating the entire plant.

Rejex-It® Migrate Goose Repellent for Turf
Used to repel geese from turf, golf courses, lawns, parks, athletic fields, cemeteries, or other areas where birds graze.

Rejex-It® Fog Force Bird Repellent Fogging Material
Fog Force is used in commercial or industrial sites, warehouses, electric substations, or other areas where birds present a hazard or nuisance.

Rejex-It® Crop Guardian Bird Repellent for Berries
Approved for use on blueberries, cherries, and grapes.
